Recycled cotton & polyester

Our new collection recycled cotton is obtained from the so-called pre-consumer waste, which represents waste from cotton fabrics that is created during the production of textile items.
In the continuation of the process, the fabrics are sorted by colors and shades and thus combined with recycled polyester, after which the finished fabric and the final products are made.

All bags in this collection contain 80% recycled cotton, and 20% recycled polyester.

Once produced, this fabric is not additionally dyed, and natural colors prevail, the natural color of cotton in the first place. This fabric is made in variation of thicknesses and weights, so our collection includes several different models:

VEGAN - apron, 180 g/m2, uni-size, 61 x 88 cm, 5 colors
LIME - drawstring bag, 285 g/m2, dimensions 45 x 36 cm, 5 colors
KIWI - drawstring bag, 200 g/m2, dimensions 43 x 37 cm, 6 colors
OLIVE - shopping bag, 300 g/m2, dimensions 49 x 37 x 14 cm, 5 colors
ALOE - shopping bag, 300 g/m2, dimensions 36 x 37.5 x 6 cm, 6 colors

Each product contains two labels with specification data, all made of recycled paper.

All the products are made of CYCLO© Recycled Fibers fabrics - https://www.cyclofibers.com/

20%
is average waste percentage during cotton processing

6.000l
of water we save averagely if use recycled cotton in textile production

7kg
of carbon dioxide we save averagely if use recycled cotton
